

## AMENITIES:

### Lo Energy Hi Performance Recycling Center

In creating engaging programs for residents, we thought there to be no better way to introduce the concept of LoHi as a “Sustainable Learning Laboratory” other than the sculptural presence of our resident Recycling Center located alongside the Love, Honor, Live Family Room & Kitchen. By incorporating a recycling hub, we wanted to ensure that we would be able to offer all our residents a learning curve while they reside within the complex. The Lo Energy Hi Performance Recycling Center attacks the children of residents, enabling them too to participate in the fun of learning how one small action, can lead to large pronounced sustainable rewards.

### CRASH LOAD LAUNDRY CAFE

A centralized Laundry Cafe took away the energy deficiencies of in unit washer and dryer units, while capitalizing on the community aesthetic of the cafe component exhibited by the presence of dual eating and folding stations.

### LEARNING LAB SEQUENCED PATHWAYS

No detail went unnoticed, as even the short stroll to your unit turns into an educational course as each floor displays thumbnail details of a pronounced system integrated within the building, as the presence of live green walls helps to clean the air and aid in visual aesthetics of what would have been considered a once dreary corridor.
