COLUMBUS METROPOLITAN LIBRARY

WHITEHALL BRANCH 2015 | WHITEHALL, OHIO

Envisioned as a library for a new generation as much community center and tech portal as a place to discover books—the new Whitehall Branch of the Columbus Metropolitan Library system goes beyond the traditional role as a repository of books and hard-published resources. Rather, it stands to serve as a vital source for lifelong learning within the surrounding area. The project's simple design goals—that the building should be **inviting, accessible, transparent, open and flexible**—have fostered a coherency where building access, functions and wayfinding are simultaneously evident throughout.

The new 19,500 square foot library is located on a three acre parcel along a main arterial road in Whitehall, an enclave of Columbus. The single story, pedestrian-scaled structure is sited along the main thoroughfare to
the north. The gentle bow-shape of the buildingare composed of flat, metal panels and glassthe north. The gentle bow-shape of the building
responds to the linear site and emphasizesstorefront with greater transparency at the publicspaces to the north and less so at the staff
spaces and meeting rooms facing south.storefront with greater transparency at the public
