

FORMAL DEVELOPMENT

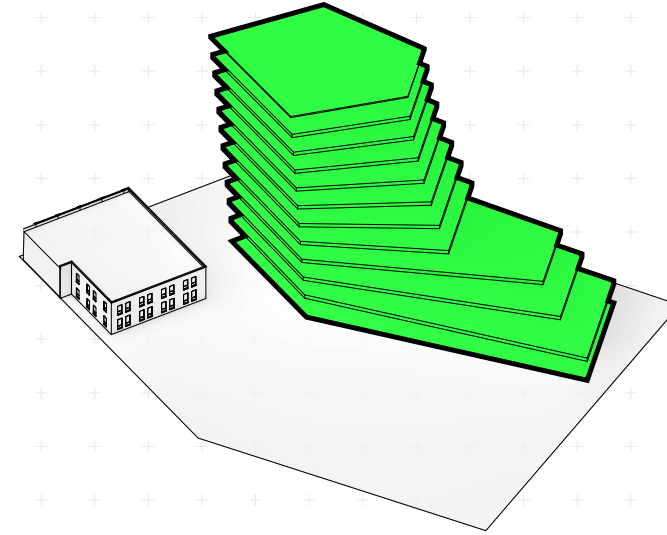

Defining a simple mass with intersecting horizontal and vertical elements as a design language.

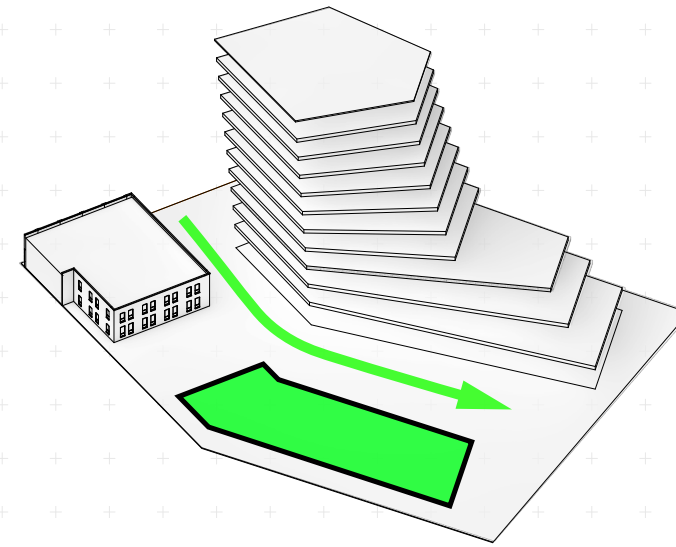

Lofting, sculpting, and contouring the mass for floor plate extrusion and formal expression.

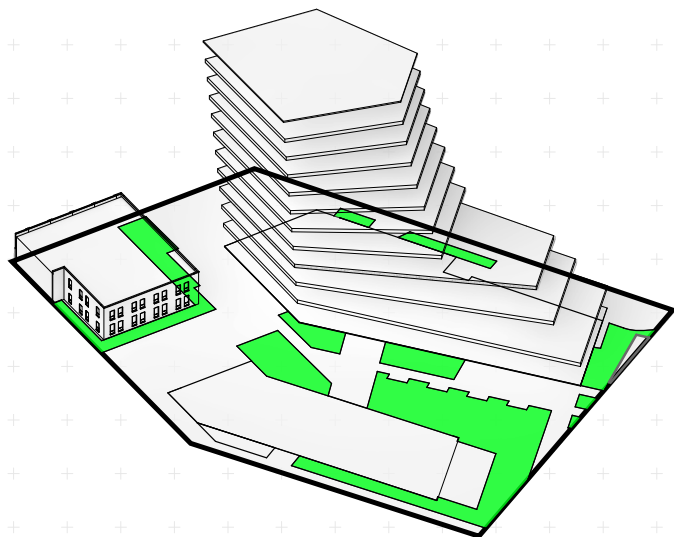

Extruding floor plate contours downward and situating the form on the site.

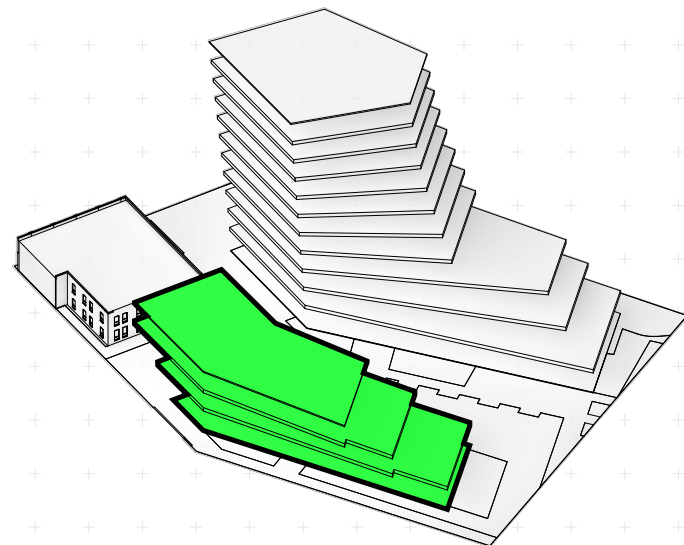

Introducing the second building to define a deliberate site path and courtyard space.

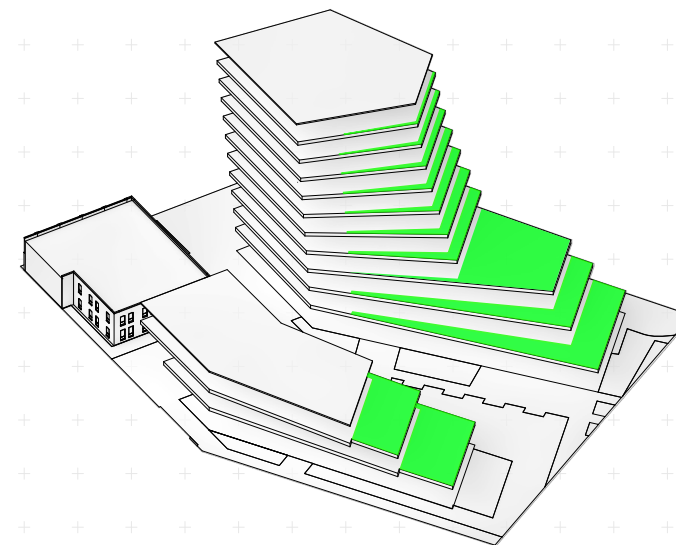

Refining the site path and public space interaction with soft and hard scape elements.

Secondary building form developed as a direct response to the main building.

Utilizing the balcony spaces as green roof area for water retention and collection.

Adding the double skin as a filtering element for eastern and western sun.
